4 January 2000

1 Introduction

This document describes the *def* option for the SVJOUR L^AT_EX 2_ε document class. For details on manuscript handling and the review process we refer to the *Instructions for authors* in the printed journal. For style matters please consult previous issues of the journal.

2 Initializing the class

As explained in the main *Users guide* you can begin a document for *Decisions in Economics and Finance* by including

```
\documentclass[def]{svjour}
```

as the first line in your text. All other options are also described in the main *Users guide*.

3 Extra commands

There are only two additional commands:

```
\subclassMath{classification}
```

and

`\subclassEon{classification}`

They are respectively needed to specify the *Mathematics Subject Classification (2000)* and the *Journal of Economic Literature Classification* at the end of the abstract. These commands are similar to `\keywords` and should appear as the last two commands inside the *abstract* environment.
